

Cat Vaccination SCHEDULE

VACCINATION	AGE
Distemper combination vaccine*	Begin as early as 6 weeks of age and repeat every 3-4 weeks until 16 weeks of age. Booster at 1 year after completion of initial series, then no more frequently than every 3 years.
Feline leukemia	Begin as early as 8 weeks of age and repeat in 3-4 weeks. Booster at 1 year after completion of initial series. Continue annual boosters for those cats at risk of exposure.
Rabies	Given by your local veterinarian (age at vaccination may vary according to local law and type of vaccine). Revaccinate one year later, and then as required.

*Distemper combination vaccine includes panleukopenia, rhinotracheitis and calicivirus. Consider inclusion of Chlamydia for cats at risk of exposure.

These recommendations vary depending on the age, breed, and health status of the cat, the potential of the cat to be exposed to an animal who has the disease, the type of vaccine, and how common the disease is in the geographical area where the cat lives or may visit.

Use needles & syringes only once!

With any vaccine or injectable medication, always use a separate sterile needle and syringe for each injection. Safely dispose of all used syringes and needles.
